Krakow: Feed the Dragon

Quotation outline

Thank you for your detailed feedback. We're delighted to hear that you and your team are excited about the proposed direction for Krakow Ribs and are ready to move the project into the next phase.

Regarding the budget estimates, we completely understand the importance of receiving individual cost ranges for each component. This will allow you to prioritize the elements that deliver the greatest impact while keeping the project aligned with your budget. We understand that the current proposal represents a significant investment. If the proposed scope exceeds the available budget, we would be happy to revisit the concept together and prepare an alternative quotation with a reduced scope.

Our proposed approach is as follows:

The largest cost variable is the dragon itself. A full-scale animatronic dragon would be prohibitively expensive, so we've developed a more cost-effective concept that still delivers a highly memorable finale.

Instead of a full-body dragon, we propose having only a big dragon's head emerge through the ceiling. This significantly reduces the mechanical complexity while retaining a powerful visual impact. The animatronics would be limited to essential movements, opening and closing the mouth, animated eyes, and dramatic red illumination, supported by a high-quality surround sound system that brings the creature convincingly to life. Since the dragon's head is an art direction decision, we also suggest that Ksusha review the construction process and material choices to explore opportunities for a more cost-effective approach. For now, we have included a budget estimate for the art pieces as a placeholder, which can be refined once the final design and production approach have been determined.

The dragon would be visible from both the ground floor and the first floor, appearing to sleep peacefully throughout most of the guest experience. This central feature would serve two key moments within the restaurant: the presentation of the ribs upon arrival and the climactic ending of the dining experience.

For the introduction, staff members would simply press a button to trigger the sequence. The dragon would come to life with subtle lighting and ambient sound before speaking in a sleepy voice:

"Feed me… feed me…"

As guests reach the climax of the rib-eating experience, the dragon suddenly awakens. Its eyes begin to glow an intense red, its mouth slowly opens, and a carefully synchronized combination of lighting, high-output smoke, and immersive sound creates the illusion that it is breathing fire. Powerful roars and dramatic effects transform the restaurant into a theatrical finale, delivering a memorable experience while keeping production costs under control.

For the presentation plates, we have intentionally kept the design more minimalistic. They will feature custom 3D-printed casings, but we recommend avoiding integrated electronics. This keeps the plates durable, easy to maintain, and significantly more cost-effective without compromising their visual appeal.

Each dining table will feature a small interactive dragon head. We have now developed a cost estimate for a system in which every dragon head contains its own electronics, including a built-in scale connected to a points system. Each dragon head would also include LED lighting, a compact speaker, and smoke effects. As guests progress through the experience, the points collected at the table would also communicate with the main dragon, creating a sense that every table contributes to awakening the creature.

This interactive system provides a strong foundation for the overall experience. It creates a clear connection between the individual table interactions and the restaurant-wide finale, making guests feel that they are collectively building toward the dragon's awakening. The modular nature of the system also makes it scalable, allowing features to be added or refined over time while keeping the initial implementation flexible and budget-conscious.

Here is already a rough estimate of what we believe the ballpark would be:

1. Show Control System with main dragon head

Main System & lights:

Item	Cost exc.
Raspberry Pi 4 model B - 4GB	€ 99,2
Power supply and storage	€ 41,3
4x LED Lights in dragon head	€ 124
Smoke Geyser	€454,50
2x Pistons for moving dragonhead	€ 165,3
Unexpected costs	€ 165,3
Subtotal	**€ 1049,6**

Audio:

Item	Cost
4x speakers: JBL 305P MKII	€393.40
1x Subwoofer: Devine RX-10SA	€205.79

Item	Cost
1x Focusrite Clarett+ 2Pre	€255.37
4x speaker mounts	€56.38
5x XLR cables	approx. €85.00
5x Power cables	approx. €80.00
Unforeseen	€100.00
Subtotal:	**€1,175.94**

Dragon head design: f

Item	Cost
Budget for designing how the main dragon looks	€2000
Subtotal:	**€2000**

Manhours:

Item	Cost
Creative hours designing sounds effects dragon	€500
5 days Installing in Krakow Gus & Joost	€3500
Project Development & Research Fee	€1000
Subtotal:	**€5000**

Total: €9225.00

2. Rib Presentation Pieces (20 units)

Gear

Item	Unit price	
3D printing costs	€11	€220
Assembling 3d prints (€350 per day)		€700
Subtotal :		**€920**

Manhours:

Item	Cost
Creative hours designing rib presentation tray	€500
Subtotal:	**€500**

Total: €1420

3. Small Dragon Heads (10 units)

Gear:

Item	Unit price	Total
Raspberry Pi 4 model B - 1GB:	€ 33	€ 330,6
Raspberry pi supplies	€ 41,30	€ 413,22
Weight sensor system	€ 33	€ 330,6
LED Lights	€41,3	€413,22
Sound Speaker	€ 24,7	€ 247,9
Small smoke system	€ 12,3	€ 123,9
3D Printing materials	€ 24,7	€ 247,9
Unforeseen	€10,00	€ 100,00
Subtotal		**€2206,34**

Manhours:

Item	Cost
Designing sounds	€1000
Designing 3D model small Dragon Heads	€1000
Ensembling technology parts (5 days)	€1750
Subtotal	**€3750.00**

Total: €5957.00

4. Total costs estimate

Total

Item	Amount (excl. VAT)
1. Show Control System & Dragon Head	€9225
2. Rib Presentation Pieces	€1420
3. Small dragon heads	€5957
Total estimate:	**€16602**

5. Additional expansion options:

LED score screens

Please note that the current proposal does not include a live scoring and leaderboard system. One option we have been considering is a digital display that shows the total weight of ribs consumed at each table, alongside a central leaderboard that allows guests to compare their scores with other tables. This would introduce an additional competitive element to the dining experience, encourage interaction between guests, and reinforce the connection between the table experience and the final dragon activation.

If this is something you would like to explore, we would be happy to further develop the concept and provide a dedicated implementation plan.

The most cost-effective solution would be to add a small LED display at each table, allowing guests to see their current score in real time. This would increase the total project cost to approximately **€17402**

For a more immersive experience, we could also install a large display within the restaurant that presents a live leaderboard, showing the scores of all tables, guest rankings, and progress towards shared goals. This would create a stronger sense of competition and encourage interaction throughout the restaurant. Including both the table displays and the central leaderboard would increase the total project cost to approximately **€18102**.

Custom loopable soundtrack

The sound design will be developed to complement, rather than replace, the restaurant's existing atmosphere. The venue's own music playlist remains the primary soundtrack, while immersive audio, voice, and sound effects are introduced at carefully choreographed moments to maximize their dramatic impact. If desired, we can also develop a custom musical score or themed soundtrack specifically for the dragon experience, similar to the tank shot experience. This can be included as an additional option in the quotation if preferred!

We would also like to provide some context on our response time. Preparing these budgets is a detailed process that requires extensive research into materials, production methods, logistics, and technical integration. Every installation we design is custom-made and developed from the ground up, from the hardware and fabrication to the interfaces that bring the concept to life. Because of this, creating accurate budget estimates takes time, and we appreciate your patience throughout the process.

Please note: As we are currently still negotiating the rights, they have not been included in this quotation.
